

AGILI

The Agily range was created with the intention of creating a specific urban furniture for the dog and its master. For their everyday entertainment and relaxation. The content is freely based on the sport disciplines of agility. However, it is not a prescriptive training track. The elements are non-transferable, firmly anchored, made of durable acacia wood.

MATERIAL:

The supporting structures of the play elements are made of acacia poles stripped of sapwood and sanded with the character of naturally growing acacia preserved logs with a diameter of 100 and 140 mm. The platform elements are made of acacia planks 27, 45 mm thick. Straight or bent steel tubes \varnothing 42 mm are used. Chains made of 6 mm stainless steel wire. Fasteners are made of stainless steel.

SURFACE FINISH:

The wooden (acacia) parts are left without a finish. Metal parts are coated with hot-dip zinc. All materials used for the surface treatment meet both hygiene and ecological requirements.

ANCHORING:

Anchoring is done by concreting acacia stands into concrete footings.
